

60° Lettering Bit

849 - 849B

Designed specifically for routing signs, these bits have 60° cutting edges, an 1/8" radius and a 1/4"-wide flat bottom. This profile allows you to create striking effects for signmaking while eliminating undesirable chipping and splintering.

By putting bevel edges on the raised characters of relief lettering you reduce the possibility of splitting the lettering, which often occurs when producing square relief effects.

Drawings are 1:1 scale
